Graphic elements in a vecto pport purchase contacts login f.a.q. detail & knowledge base Here below you can find the detail you have requested. QTEC_01_5 Raster drawings vs Vector Drawings What are the differences between raster drawings and vector drawings? Vector images, also known as objectoriented images, are defined mathematically as a series of dots joined by lines. Graphic elements in a vector file are called object. Each object is an autonomous entity provided with properties such as color, shape, contour, dimen nition and without influencing any other objects present in the illustration. When raster images are used, very small details can be enhanced, drastic changes and be made and effects can be intensified. Raster images, also called bitmap or pictorial graphics images, are made up by individual dots called pixels (picture elements), arranged and colored differently to create a pattern. When an image is expanded, the individual components making up the overall image can be seen. Expanding the dimens
